## Description

The FPF2895C features a 28 V and 5 A rated current limit power switch, which offers Over-Current Protection (OCP), Over-Voltage Protection (OVP), and True Reverse Current Block (TRCB) to protect system. It has low On-resistance of typical $27 \mathrm{~m} \Omega$ with WL-CSP can operate over an input voltage range of 4 V to 22 V .
The FPF2895C supports $\pm 10 \%$ of current limit accuracy, over-current range of 500 mA to 2 A and $\pm 5 \%$ of current limit accuracy, over-current range of 2 A to 5 A , flexible operations such as selectable OVP, selectable ON polarity and selectable OCP behavior, which can be optimized according to system requirements.
The FPF2895C is available in a 24-bump, 1.67 mm x 2.60 mm Wafer-Level Chip-Scale Package (WL-CSP) with 0.4 mm pitch.

## Setting Current Limit

FPF2895C current limit is set with an external resistor connected between IsEt and GND. This resistor is selected using the following equation:

$$
\begin{equation*}
R_{S E T}(k \Omega)=\left(\frac{4674.89}{I_{S E T} m A}\right)^{1 / 1.0326} \tag{1}
\end{equation*}
$$

Resistor tolerance of $1 \%$ or less is recommended. $5 \%$ tolerance can be achieved only when ILIM is set to larger than 2A.
